Work Experience

Choozle
Full-Stack Development Intern

Assisted in the development of the Choozle advertizing platform. Worked consisted of error fixing, code refactoring, and feature addition. Participated in an Agile development environment with a team of 5 developers.
Company information can be found at: https://choozle.com

Technologies: PHP, JavaScript, SQL, HTML, Git
June 2015 - September 2015

SapientNitro
Junior Interactive Developer

At SapientNitro I take part in every step involved in creating rich web apps and static sites for clients. This involves: creating proof of concepts, consulting with designers, programming, running Q/A tests, and deploying production ready code.
Information about SapientNitro can be found at: http://sapientnitro.com

Technologies: JavaScript, HTML, CSS, PHP, Node.js, React/Redux, Git
June 2016 - Present

Projects

Interlude
Interactive Developer

February 2015 - May 2015

An music based multiplayer game with the goal of raising awareness about music education. Players used personal smart devices as controllers. Interlude was displayed at the imagine RIT festival with over 1000 visitors and 200 games played. Experience created in a team of 4 designers and 4 developers.

Contribution: Programmed main display, releated game logic, and server to facilitate multiplayer.
Technologies: JavaScript, Node.js, Socket.io, HTML5 Canvas, Git

Northeastern Alumni Blog
Interactive Developer

June 2016 - August 2016

This is the current Alumni Blog site used by Northeastern University. This project involved a team of 3 developers, 2 designers, and 2 managers. In my role as one of the core developers, I was responsible for creating components, setting up Redux actions and stores, and managing REST requests. The project can be found live at: https://northeastern.edu/alumni/blog

Contribution: Assembled inner circuitry and programmed server handling orders.
Technologies: JavaScript, React/Redux, Node.js, PHP, Wordpress
